INFIIOT TECHNOLOGIES PVT. LTD.

Explore World of IoT with InfiIoT

Connect your devices and securely access, monitor, analyze, predict and act on data in newer and simpler ways.

Easy & Futuristic

Super-Easy integration. Customizable data formats. No point count restrictions. On-the-fly Future Prediction.

Secure

Supports AES Secure Payloads. Transport Layer Security(TLS) based User and Payload Authentication.

One-Stop Solution

Minimal integration time. Our libraries, Software UI/UX, and connectivity work together out of the box.

Edge-to- Cloud

Decrease your time to market with edge-to-cloud platform that abstracts all the complexity of IoT for you.

InfiIoT Platform is taylored specifically to support variety of IoT hardwares, protocols, interfaces along with cloud computing, analytics, predictions, security and various other latest technologies to suit for every Industry needs.

Why Learn InfiIoT?

Learning InfiIoT Platform builds a solid core understanding of IoT architechture and its applications in real-world. InfiIoT Platform gives its users the most advanced tools to getting connected products and solutions to market in least posiible time.

Features:

✓ Essentials
- Manage devices, variables and historical data
- Multiple dashboards for project specific controls
- Perform bulk operation across thousands of devices
- Automated device onboarding
- Ingest data from third party platforms
- API's and SDK's to support various hardware platforms and help development faster

✓ Events & Reporting
- Trigger notifications and alerts using complex logic
- Create csv, pdf reports containing tables, charts, widgets & send over email
- Incidents log for getting log of all events that got triggered by InfiIoT events

✓ Analytics
- Find and analyze trends, anomalies, and correlations across your variables
- Export/Import device data as csv or PDF's
- Multi-Threaded Interface for faster and responsive behaviour

✓ Security
- SSL for end-user applications as well as for your devices
- Oauth secured token based User Authentication
- Latest version Transport layer security with AES Secure payloads

✓ End-customer management
- Manage devices, variables and historical data
- Token management interface for saving you time

Specifications:

✓ InfiIoT Visuals
- Real-Time data analysis and control
- Interactive and responsive widgets consists various charts, maps, labels, indicators, tables, and controls
- Fixed and Custom Data Range Selection
- Draggable and Droppable Widgets
- On-the-fly Widget editing
- Tools section with tools such as Fullscreen, Screenshot, make home, settings, delete options

✓ Devices:
- Support 200 variables, 20 devices, per token
- Real-time and custom range Device/variable data analytics using charts and tables
- Import/Export Device and variable data into csv
- Add/Edit/Delete Variables and Devices
- Live Device Location Viewer in section

✓ Events Engine
- Trigger multiple events and multiple actions for every variable
- Various Actions consists of sending Email, SMS, Whatsapp, Telegram, Set a Variable, Webhooks on Event occurence
- Configurable Action Messages with various options
- Real-time Event and Actions log
- Enable/Disable, Import/Export, Edit/Delete Events and Actions

Applications

Industry

HealthCare

Agriculture

Home Automation

Hobby Projects
